Figure 1: Recommended Plan of Study for U2G Statistics BS-MPH. Statistics track: Business, Industry, Government, Research.

In general, 12 s.h. can double count for BS and MPH s.h., but these courses must be taken after applying to MPH program (so, they usually occur in the 4th year of study).

In the U2G MPH Quantitative Methods subtrack, the standard sequence of 4120, 5120, 6110 is replaced by 5710, 5720, 5730 (Advanced Biostatistics Sequence).

HMP:4000 is a spring elective likely taken in either the 4th year or in the summer after the 4th year (recommended).

The practicum should be taken in the 5th year after all public health core requirements are completed.
